

MEGA K

2-0-26 POTASSIUM ACETATE

GENERAL INFORMATION:

MEGA K is a source of supplemental potassium derived from potassium acetate designed for enhanced foliar uptake. Potassium acetate is a high solubility, low salt index liquid potassium that can be foliar or soil applied. Foliar applications have been demonstrated to have significantly higher rates of absorption over other types of potassium. **MEGA K** increases plant strength and tolerance associated with environmental stress.

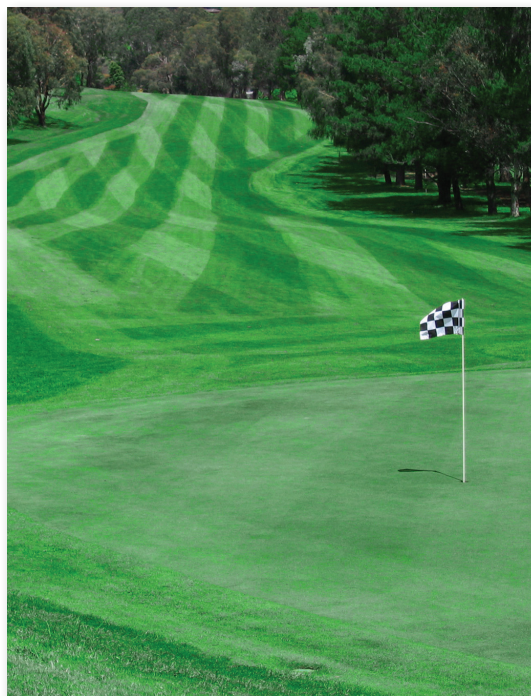

USE RATES:

Apply 2 - 3 ounces per 1,000 square feet weekly or biweekly based upon tissue potassium levels. Each gallon delivers 3.19 lbs of foliar potassium.

GUARANTEED ANALYSIS:

Total Nitrogen (N) 2.0%
 2.0% Urea nitrogen
Soluble Potash (K₂O) 26.0%

Derived from: urea, potassium acetate.

MEGA K *delivers unsurpassed
foliar potassium delivery.*
